

MiSSiONS Settings Manual

For administrators with the GM password

Version 1.2.0 · 2026-05-21

Welcome

This manual covers every screen behind the **Settings** door of the MiSSiONS app. It's organised in three parts:

- **Part 1, Administration.** The bits that aren't tied to a game type: the password gate, the public URL, security, updates, and the QR template you print for player access.
- **Part 2, MiSSiONS configuration.** Locations, modes, missions, and the rules players see in-game. This is the bulk of day-to-day work.
- **Part 3, CityRush configuration.** A separate game type with its own modes, GPS-targeted missions, hints, and special missions.

CityRush is intentionally split out, it shares the settings shell but has its own logic (GPS targets, hint sequences, special missions) that doesn't apply to MiSSiONS games. If you only ever run one of the two, you can skip the other part.

The password to enter settings is held by whoever installed the app and should not be shared casually, anyone with it can change every rule, mission, and the password itself. The default after a fresh install is `admin1898` ; change it on the Security tab as soon as possible.

The screenshots in this manual were captured on a clean demo database seeded with three locations (Altstadt, Stadtpark, Hauptbahnhof), six missions, and a CityRush mode with three missions. Your real installation will look the same but show your own data.

PART 1

Administration

The password gate

Password gate to open settings.

Tap the cog icon in the top-right of the landing screen. You'll see the password gate above. Type the GM password and press **Unlock** (or hit Enter). Wrong password? The field shakes and a red error appears beneath. Press **Back** to return to the landing screen.

Every settings tab sits behind this gate, so anyone you don't trust with full admin access shouldn't have the password.

General

General tab: public URL and timeout message in every language.

Public URL. The address players use to reach your game. When you run `start-tunnel-windows.bat`, the bundled Cloudflare quick tunnel prints a URL like `https://abc-def-ghi.trycloudflare.com`. Click **Detect** and the app finds that URL automatically. You can also paste it manually if you host the app some other way.

End-of-game message. When a game's timer runs out, this message is shown to every player. Type it once per language, the 🌐 **Auto** button fills in the empty languages from whichever language you started in. Save before leaving the tab.

Security

The screenshot shows a mobile application interface with a dark theme. At the top, there is a header bar with a back arrow and the text 'BACK', the title 'SETTINGS', and a language selector 'EN'. Below the header, there is a horizontal menu with options: 'GENERAL', 'LOCATIONS', 'MISSIONS', 'CITYRUSH' (highlighted with an orange star icon), 'RULES', 'QR TEMPLATE', 'SECURITY' (highlighted with a red underline), and 'UPDATES'. The main content area is titled 'CHANGE PASSWORD' and contains three input fields labeled 'CURRENT PASSWORD', 'NEW PASSWORD', and 'CONFIRM'. Below these fields is a red button labeled 'UPDATE'.

Security: change the GM password.

Change the GM password. Type your current password, then the new one twice. The new password takes effect immediately and applies to every operator on every device, make sure you have a way to communicate it out before changing it.

Updates

Updates: current version and the update button (git pull + npm install).

The app can update itself directly from GitHub. Set the **GitHub repository URL** once (e.g. `https://github.com/you/missions-app`); the **Version** field shows the currently installed version. Press **Update now** and the app runs `git pull && npm install --production` and restarts itself. Output appears in the box below so you can confirm what changed.

Be careful with this in the middle of a live game, the restart will briefly drop every player's connection. They reconnect automatically, but it's still disruptive. Update between sessions, not during them.

QR template

QR template: paper size, upload and QR marker drag.

For locations where you print physical access cards (a folded sheet with your branding plus a QR code), upload your template PNG here and drag the orange QR marker to where the code should land. Pick a paper size first, A4 by default. **Save position** persists the marker, and **Delete template** clears the upload. When a GM creates a new game, the QR is rendered onto this template at the position you set.

PART 2

MiSSiONS configuration

Locations

Locations tab listing three demo locations.

A **location** is a physical place where games take place. The seeded demo has three: Altstadt, Stadtpark and Hauptbahnhof. Each location has its own mission library, when a GM starts a game at "Altstadt", players get Altstadt's missions plus any **Pool** missions (missions tied to no specific location).

Use the **+ Location** button (top of the list) to add a new one. Click **Edit** on a card to change name or rules. **Delete** removes the location and **all its missions**, confirm carefully.

The image shows a mobile application interface with a dark theme. At the top, there's a 'SETTINGS' header with a 'BACK' button on the left and 'EN' on the right. Below the header is a horizontal menu with options: 'GENERAL', 'LOCATIONS' (which is highlighted with a red underline), 'MISSIONS', 'CITYRUSH' (with a star icon), 'RULES', 'OR TEMPLATE', 'SECURITY', and 'UPDATES'. In the top right corner of the settings area, there's a red button with a plus sign and the text 'LOCATION'. The main content is a modal titled 'ADD LOCATION'. It contains three input fields: 'NAME' (empty), 'MISSIONS PER GAME' (containing the number '10'), and 'MIN. LOCATION-SPECIFIC MISSIONS' (containing the number '3' and a small square icon to its right). Below these fields is a section titled 'ERLAUBTE MEDIEN' (Allowed Media) with three items: 'Foto' (with a camera icon and a checked checkbox), 'Video' (with a video icon and a checked checkbox), and 'Indoor' (with a house icon and a checked checkbox). At the bottom of the modal are two buttons: 'CANCEL' and 'CREATE' (which is red).

"Add location" modal showing every option.

The Add Location dialog:

- **Name:** what the GM sees when picking a location.
- **Min. location MISSIONS:** when starting a game, the engine guarantees this many missions are pulled from this location (the rest come from the pool). Use it to make sure games always feel location-appropriate.
- **Allow photo / video / indoor:** whether missions of those kinds can be selected from this location. Turning off "indoor" is useful for outdoor-only locations where the weather is reliable.

Modes and the mission library

MiSSiONS tab: mode bar, location filter and mission list.

The mission library is split by **mode** (the top bar, MiSSiONS, ADVANCED, etc.) and by **location** (the dropdown). A mission belongs to exactly one mode and either one location or to the global Pool.

Mode tabs. Each mode is a separate mission library tied to a ruleset and a timer. Click **+ Mode** to add one. Click ✎ to edit a mode's name, ruleset or default duration. The first mode ("MiSSiONS", id 1) cannot be deleted, that's the safe default.

Location filter. "All" shows everything in the current mode; pick a location to see just its missions; **Pool** shows only mode-wide missions with no location.

Bulk actions. Tick the checkboxes on missions, then use the toolbar that appears: **Copy to mode...** to duplicate missions into another mode, or **Export** to download a JSON file you can import elsewhere.

Import. The **↑ Import** button reads a JSON file with the same shape Export produces, handy for moving missions between installations.

"Add MiSSION" modal with the multi-language editor and auto-translate.

Each mission has five language fields for its name, description, and task. Don't try to fill all five yourself, write one language properly, then click **Auto** at the top of the name section to fill the rest automatically. Edit afterwards if the translation needs polish.

- **Location:** restricts the mission to one location (or leave it on Pool for any).
- **Mode:** usually pre-selected to whatever mode you were viewing.
- **Media type:** photo or video. Players will be locked into that format when they submit.
- **Points:** how many points the team gets when you approve their submission. Penalties for late uploads are subtracted from this.
- **Also indoor:** set when the mission can be done inside (rain backup missions). Locations that have "allow indoor" off will skip these even if they're in the mode.

The **Description** and **Task** tabs:

- **Description** is the story/context shown above the camera button.
- **Task** is the explicit "do this" instruction, keep it short.

Click **Save** when you're done. The mission appears in the list immediately.

Rules

Rules tab: ruleset switcher and rule list with drag-reordering.

A **ruleset** is a list of rules shown to players in the in-game Rules modal. The seeded **Standard** ruleset cannot be deleted, but you can add others (e.g. a family-friendly variant) and assign different rules to different modes.

For each rule line you can use the placeholders `[photo]`, `[video]`, `[indoor]`, they expand to small icons in the player view. Drag rules up and down to reorder; the 🌐 button on a rule auto-translates it; the 📄 button copies a rule to another ruleset. Press **Save** when done, unsaved edits are highlighted.

PART 3

CityRush configuration

CityRush is a separate game type. Players physically walk to map markers, arrive at each target, and complete a task there. The CityRush settings panel mirrors the MiSSIONS layout but with extra fields per mission for coordinates, hint sequences, and special missions. Modes and missions configured here are **only** offered when the GM starts a CityRush game, they don't appear in MiSSIONS games and vice versa.

CityRush modes

CityRush tab: mode bar at the top, mission list below.

The CityRush tab works like the MiSSIONS tab: a row of mode tabs at the top, then the missions belonging to the active mode below. Click **+ Mode** at the right of the mode bar to create a new CityRush mode.

The screenshot shows a mobile application interface for creating a new CityRush mode. At the top, there's a 'SETTINGS' header with a 'BACK' button and a language selector 'EN'. Below this is a horizontal menu with options: 'GENERAL', 'LOCATIONS', 'MISSIONS', 'CITYRUSH' (which is highlighted with a red underline), 'RULES', 'OR TEMPLATE', 'SECURITY', and 'UPDATES'. The main content area is titled 'CITYRUSH MODES' with a '+ MODE' button. A modal form titled 'ADD CITYRUSH MODE' is displayed in the center. This form contains four fields: 'NAME' with a text input showing 'e.g. Old Town Tour'; 'RULESET' with a dropdown menu showing '- No ruleset -'; 'ALLOWED MEDIA' with two checkboxes, 'Foto' (checked) and 'Video' (checked); and 'DEFAULT DURATION (MINUTES)' with a text input showing '60'. At the bottom of the form are 'CANCEL' and 'CREATE' buttons. Below the form, a list of existing modes is partially visible, starting with 'Spontaner Tanz'.

New CityRush mode: ruleset, allowed media, default duration.

A CityRush mode carries its own:

- **Name:** what the GM picks from the dropdown when starting a game.
- **Ruleset:** the same ruleset list as MiSSiONS, but the rules apply to this mode's games.
- **Allowed media:** photo, video, or both. Affects which media-type missions are allowed in this mode.
- **Default duration (minutes):** the timer the game starts with.

New CityRush mission: GPS target, radius, map visibility.

A CityRush mission has every field a MiSSiONS mission has, plus the location-aware extras:

- **GPS coordinates + radius:** where the target is, and how close (metres) players must get before the task unlocks. Use a small radius (15–25 m) in dense city blocks; bigger (40–60 m) in open parks.
- **Show on map:** whether the target marker is visible to players. Turn off for "find your way using only the hints" missions.
- **GPS hints:** revealed one by one as the team walks; useful when the marker is hidden or the area is large.
- **Task hints:** revealed one by one after arrival, when teams are stuck on the task itself.
- **Media required:** photo or video; mutually exclusive with the answer field below.
- **Timed:** when a team taps "Start", a countdown begins. Penalties kick in when it's exceeded; configure the penalty interval and points right below.

Special mission: playable any time, no GPS, with cooldown.

Toggle **Special mission** to lift the mission out of the linear sequence. Special missions:

- Appear in the player's ★ tray, playable any time, in any order.
- Skip the GPS-arrival step entirely, even if you set coordinates.
- Use a **Cooldown** (minutes) to limit re-attempts: 0 means each team can only play it once; 5 means five minutes between attempts. A GM rejection clears the cooldown immediately.

Save when you're done. Players who already started a game won't see new missions added mid-game, push them out before launch.

Tips for daily operation

- Use **Auto-translate** liberally on both MiSSiONS and CityRush missions, getting all five languages right by hand is a chore the AI does well enough most of the time.
- **Pool missions** (MiSSiONS only) are **filler**, not a rain-backup. They're still outdoor missions, the difference is they're not tied to a specific location, so the engine can pull them into any game to

round out a mode that would otherwise have too few location-specific missions. Use the **Also indoor** flag on individual missions if you want them playable in bad weather; that's a separate property from Pool.

- For CityRush, **always test the radius on foot**, the GPS in a phone is rarely accurate to within 5 metres in a built-up area, and a too-tight radius leaves teams stuck.
- **Export your missions occasionally** as a backup. The JSON is small, human-readable, and you can re-import after a database wipe.
- **Don't update mid-session.** It works, but you'll lose face with whoever's playing.
